

Helsinki, 24 May 2024

**Addressee(s)**

Registrant as listed in Appendix 3 of this decision

**Date of submission of the dossier subject to this decision**

28 April 2023

**Registered substance subject to this decision ("the Substance")**

Substance name: Vinyl ethylene carbonate

EC/List number: 700-261-7

**Decision number:** Please refer to the REACH-IT message which delivered this communication (in format TPE-D-XXXXXXXXXX-XX-XX/F)

**DECISION ON TESTING PROPOSAL(S)**

Under Article 40 of Regulation (EC) No 1907/2006 (REACH), you must submit the information listed below by **1 December 2026**.

Requested information must be generated using the Substance unless otherwise specified.

**Information required from all the Registrants subject to Annex IX of REACH**

1. Sub-chronic toxicity study (90-day) (Annex IX, Section 8.6.2.; test method: OECD TG 408) by oral route, in rats.

The reasons for the decision(s) are explained in Appendix 1.

**Information required depends on your tonnage band**

You must provide the information listed above for all REACH Annexes applicable to you in accordance with Articles 10(a) and 12(1) of REACH. The addressee(s) of the decision and their corresponding information requirements based on registered tonnage band are listed in Appendix 3.

**How to comply with your information requirements**

To comply with your information requirements, you must submit the information requested by this decision in an updated registration dossier by the deadline indicated above. You must also **update the chemical safety report**, where relevant, including any changes to classification and labelling, based on the newly generated information.

You must follow the general requirements for testing and reporting new tests under REACH, see Appendix 4.

**Appeal**

This decision, when adopted under Article 51 of REACH, may be appealed to the Board of Appeal of ECHA within three months of its notification to you. Please refer to <http://echa.europa.eu/regulations/appeals> for further information.

### **Failure to comply**

If you do not comply with the information required by this decision by the deadline indicated above, ECHA will notify the enforcement authorities of your Member State.

Authorised<sup>1</sup> under the authority of Mike Rasenberg, Director of Hazard Assessment

Appendix 1: Reasons for the decision

Appendix 2: Procedure

Appendix 3: Addressees of the decision and their individual information requirements

Appendix 4: Conducting and reporting new tests under REACH

---

<sup>1</sup> As this is an electronic document, it is not physically signed. This communication has been approved according to ECHA's internal decision-approval process.

## **Appendix 1: Reasons for the decision**

### **Contents**

1. Sub-chronic toxicity study (90-days) .....	4
<b>References .....</b>	<b>6</b>

## 1. Sub-chronic toxicity study (90-days)

1 A sub-chronic toxicity study (90 day) is an information requirement under Annex IX, Section 8.6.2.

### 1.1. Information provided to fulfil the information requirement

2 You have submitted a testing proposal for a Sub-chronic toxicity study (90 day) according to OECD TG 408 with the Substance.

3 ECHA requested your considerations for alternative methods to fulfil the information requirement for Repeated dose toxicity. You provided your considerations concluding that there were no alternative methods which could be used to adapt the information requirement(s) for which testing is proposed. ECHA has taken these considerations into account.

4 ECHA received third party information concerning the testing proposal during the third-party consultation.

5 A third party has indicated that a short-term repeated dose toxicity study (28-days) with the Substance is available. The observed findings include mortality and target organ toxicity in males at a dose of 100 mg/kg bw/day, which are sufficient to result in classification of the registered substance for STOT-RE in Category 2 and therefore a sub-chronic toxicity study (90 days) is not required according to Section 8.6.2, Column 2 of Annex IX of the REACH Regulation.

6 Annex IX, Section 8.6.2, Column 2, specifies that a sub-chronic toxicity study (90 days) does not need to be conducted if a reliable short-term toxicity study (28-day) is available showing severe toxicity effects according to the criteria for classifying the substance as STOT RE Category 1 or Category 2, and where the NOAEL-90 days can be extrapolated for the same route of exposure.

7 ECHA notes that an available acute oral toxicity study (OECD TG 423, 2019) with the Substance estimates an acute oral LD50 cut-off value of 300 mg/kg bw/day meeting the criteria for classifying the Substance as Acute Toxic 3 (50-300 mg/kg bw/day). The LD50 cut-off value is similar to the dose levels at which lethality is observed in an available short-term repeated dose toxicity study with the Substance (100-300 mg/kg bw/day). As such, acute toxicity cannot be distinguished from true repeated exposure toxicity and therefore classification of the Substance as a specific target organ toxicant (repeated exposure) is not warranted.

8 ECHA concludes that the criteria of Annex IX, Section 8.6.2., column 2 are not met and the information requirement for the sub-chronic toxicity study (90 days) cannot be adapted on this basis.

9 ECHA agrees that a 90-day study is necessary.

### 1.2. Specification of the study design

10 You proposed testing in the rat. ECHA agrees with your proposal because the rat is the preferred species according to the OECD TG 408. Therefore, the study must be conducted in the rat.

11 You proposed testing by the oral route. ECHA agrees with your proposal because this route of administration is appropriate to investigate systemic toxicity; Guidance on IRs and CSA, Section R.7.5.4.3.2.

*1.3. Outcome*

- 12 Your testing proposal is accepted under Article 40(3)(a) and you are requested to conduct the test, as specified above.

## **Appendix 2: Procedure**

ECHA received your testing proposal(s) on 12 May 2023 and started the testing proposal evaluation in accordance with Article 40(1).

ECHA held a third-party consultation for the testing proposal(s) from 30 June 2023 until 14 August 2023. ECHA received information from third parties (see corresponding Appendix/Appendices

ECHA followed the procedure detailed in Articles 50 and 51 of REACH.

The deadline of the decision is set based on standard practice for carrying out OECD TG tests. It has been exceptionally extended by 12 months from the standard deadline granted by ECHA to take into account currently longer lead times in contract research organisations.

ECHA notified you of the draft decision and invited you to provide comments.

ECHA did not receive any comments within the commenting period.

ECHA notified the draft decision to the competent authorities of the Member States for proposals for amendment.

As no amendments were proposed, ECHA adopted the decision under Article 51(3) of REACH.

**Appendix 3: Addressee(s) of this decision and their corresponding information requirements**

In accordance with Articles 10(a) and 12(1) of REACH, the information requirements for individual registrations are defined as follows:

- the information specified in Annexes VII, VIII and IX to REACH, for registration at 100-1000 tpa;

<b>Registrant Name</b>	<b>Registration number</b>	<b>Highest REACH Annex applicable to you</b>

Where applicable, the name of a third-party representative (TPR) may be displayed in the list of recipients whereas ECHA will send the decision to the actual registrant.

## Appendix 4: Conducting and reporting new tests for REACH purposes

### 1. Requirements when conducting and reporting new tests for REACH purposes

#### 1.1. Test methods, GLP requirements and reporting

- (1) Under Article 13(3) of REACH, all new data generated as a result of this decision must be conducted according to the test methods laid down in a European Commission Regulation or to international test methods recognised by the Commission or ECHA as being appropriate.
- (2) Under Article 13(4) of REACH, ecotoxicological and toxicological tests and analyses must be carried out according to the GLP principles (Directive 2004/10/EC) or other international standards recognised by the Commission or ECHA.
- (3) Under Article 10(a)(vi) and (vii) of REACH, all new data generated as a result of this decision must be reported as study summaries, or as robust study summaries, if required under Annex I of REACH. See ECHA Practical Guide on How to report robust study summaries<sup>2</sup>.
- (4) Under the introductory part of Annexes VII/VIII/IX/X to REACH, where a test method offers flexibility in the study design, for example in relation to the choice of dose levels or concentrations, the chosen study design must ensure that the data generated are adequate for hazard identification and risk assessment.

#### 1.2. Test material

- (1) Selection of the Test material(s)  
The Test Material used to generate the new data must be selected taking into account the following:
  - the impact of each constituent/ impurity on the test results for the endpoint to be assessed. For example, if a constituent/ impurity of the Substance is known to have an impact on (eco)toxicity, the selected Test Material must contain that constituent/ impurity.
- (2) Information on the Test Material needed in the updated dossier
  - You must report the composition of the Test Material selected for each study, under the "Test material information" section, for each respective endpoint study record in IUCLID.
  - The reported composition must include all constituents of each Test Material and their concentration values and other parameters relevant for the property to be tested.

This information is needed to assess whether the Test Material is relevant for the Substance.

Technical instructions on how to report the above is available in the manual on How to prepare registration and PPORD dossiers<sup>3</sup>.
