

## Justification for removing a substance from CoRAP prior to evaluation

**Substance Name (public name):** Propyl acetate

**EC Number:** 203-686-1

**CAS Number:** 109-60-4

**Authority:** Health and Safety Authority, Ireland

**Date:** 21 March 2023

**The priority for evaluating the substance has been reconsidered based on:**

<input type="checkbox"/>	<b>The initial hazard ground of concern has been verified and considered of low priority</b>

<input type="checkbox"/>	<b>The initial exposure/risk ground of concern has been verified and considered of low priority</b>

<input checked="" type="checkbox"/>	<b>The generation of information under Substance Evaluation is considered of low priority because</b>
	<p><input checked="" type="checkbox"/> Already ongoing or implemented regulatory process(es)</p> <p>ECHA conducted a compliance check prior to the proposed substance evaluation for propyl acetate and issued compliance check decisions in October 2016 and August 2019. The decisions included requests for a sub-chronic toxicity study (90-day, OECD TG 413), a pre-natal developmental toxicity study (OECD TG 414) in a first species, a pre-natal developmental toxicity study (OECD TG 414) in a second species and an extended one-generation reproductive toxicity study (OECD TG 443) with propyl acetate.</p> <p>The IE CA considers that the information provided in response to the compliance check decisions is sufficient to address the initial concern for reproductive toxicity identified in the CoRAP justification document. In addition, the IE CA considers that based on the OECD TG 413 study, further assessment of the DNELs and RCRs is not warranted at this time. Therefore, it is concluded that substance evaluation is no longer required.</p> <p>The substance is considered low priority for further regulatory action at this time.</p>
